**Other comments or suggestions:**

In the translated bachelor thesis I appreciate most the work with literature – the author used a larger amount of data. The weak point of the thesis is the methodology – it is not very clear how many respondents were interviewed, as different numbers appear in several places. The author also did not sufficiently compare the survey data with the city-wide data-I miss working with data, statistics. Also, the conclusions are more or less general, and the author relies primarily on actual studies, not her own conclusions.

**Questions for thesis defence:**

1. According to what methodology did you identify respondents who belong to the above poverty line (APL) and belong to the below poverty line (BPL)?

2. In your paper you state that female unemployment is higher than male unemployment. Is this also true for other states in India? If so, what is the reason for this?
