Other comments or suggestions:

Thesis contains a questionnaire action on the importance of IT in the field of health. The result of the work is a set of pie charts representing the results of the survey.

Questions for thesis defence:

1) The interviewed group is probably 25 people. Is it a large enough size? What is the possible error of the results?

2) According to which criteria were the interviewees selected and the size of the group determined?

3) Pie charts have been used, what other suitable charts could be used?
