Diploma thesis of BSc. Eva Coufalová, I can evaluate such a complex processing work from a variety of perspectives, focused on edible insects in the Czech Republic, which builds on a previous bachelor thesis. Student worked actively throughout addressing this topic, she completed the course in microbiological diagnostics to then actively collaborated with a team of staff at the State Veterinary Institute in Prague, in food hygiene specialization. The obtained data were evaluated in collaboration with experienced specialists in the field of food microbiology. Except for minor inaccuracies in the formal text of the diploma thesis, it is thematically pilot work in the field of food hygiene on a given topic: edible insects and microbiological results achieved interprets and evaluates them based on applicable standards for the Czech Republic and according to the legislation in force in the EU. I recommend diploma thesis for the defense, the results brings valuable findings and can be immediately used for other research topics focused on the study using of technological procedures in the processing of insects.
