Other comments or suggestions:

This is a frontier paper attempting to do research in the Internet of Things. This search is done in a somewhat non-standard way. The author defines the conclusions from the research in the Results chapter and further makes conclusions in the Discussion and Conclusion as well. At the end of the thesis, there is a chapter of recommendations, but this is a general assessment of what an IoT architecture should look like. Overall, the thesis does not bring "new knowledge". The author was tasked to "To perform and implement the framework or system to improve the entire cloud computing and IoT network design" and to perform a qualitative and quantitative analysis of the problem, which is effectively missing in the thesis.

The author consulted the thesis very little. The result is very weak.

Plagiarism control: The system Theses.cz has not assessed the thesis as suspicious.
