Other comments or suggestions:

Marie started to work on the topic and collected data in 2017. While I have really appreciated her engagement into the fieldwork, the work on theoretical background and data analysis have unfortunately not reached a standard level for a master thesis. Literature review is very shallow and many important references are missing, the maps are not in the adequate format and there are many other overall gaps which might have been filled if the student had communicated with the supervisor. I was not aware of the planned thesis submission until the very short time before the deadline and had no chance to comment on the content before. That's why I cannot recommend the thesis for the defence, I suggest to work more on both literature review and data analysis/results presentation and interpretation before the thesis may be submitted for the defence.

Plagiarism control: The system Theses.cz has not assessed the thesis as suspicious.
