Other comments or suggestions:

The student gave an overview of the most important Linux distributions and how to install them. He gave an overview of the structure and operation of Linux that is understandable to the general user.

The thesis is written comprehensibly in good English. Technical terms are used correctly.

In the work I miss the description of the system administration issues and the system security issues.

Questions for discussion:

1) Discuss the security of Unix operating systems

2) Which Linux distribution would you select for the server that is intended to be used mainly for the scientific computation.

Plagiarism control: The system Theses.cz has assessed the thesis as suspicious. After a manual check the file was not assessed as plagiarism.
