Other comments or suggestions:

The bachelor's thesis focused on the evaluation of the operation and intensification of the wastewater treatment plant on the principle of constructed wetland technology contains a well-arranged theoretical part summarizing a significant amount of relevant knowledge in relation to the issue, especially from foreign publications.

The practical part of the work contains, based on the data from the theoretical part of the work, the evaluated operation of a specific wastewater treatment plant.

The student demonstrated professional knowledge, work with professional literature and independence in the processing of the work.

I state that the submitted bachelor's thesis meets the content and formal requirements and requirements for bachelor's theses.

Due to the scope, implementation and evaluation of the issue, I recommend the bachelor's thesis to defend with the final grade excellently.

Plagiarism control: The system Theses.cz has not assessed the thesis as suspicious.
