Other comments or suggestions:

The author started to write the text several times and changed a former research design that did not meet the criteria for the thesis. The final version has substantial formal mistakes, namely in the structure of the text and in citations. The theoretical part presents the quality of life from different viewpoints, reflecting new trends in supporting well-being in psychology (mindfulness approach).

The practical part is based on quantitative research. The construction of the questionnaire could be described in more detail. The following parts of the research design are explained adequately. I appreciate using of inductive statistics (qualitative analysis), but the interpretation of its results is quite poor.

Given the total effort that the author invested in the thesis, I assess it as "good".

Plagiarism control: The system Theses.cz has not assessed the thesis as suspicious.
