**Other comments or suggestions:**

The submitted thesis is rather difficult to evaluate. The theoretical part is a plethora of mistatements and errors. For example formulas on page 14 are wrong. So is the formula for terminal value on the following page. The definition of risk free rate, equity risk premium and other parameters are confusing. Relative valuation is mentioned and some metric is introduced on three pages, before the author turns to "Practical part" of his work. Thesis contains almost no citation.

**Questions for thesis defence:**

1. On the page 44 you are referring to New York University research, but there is no such research listed in the references. Why?
2. Could you explain your statement on the page 38, where you state that "Alibaba's estimated return to stockholders is highest, whereas Walmart's weighted average cost of capital of 6.14% is the lowest. As a result, Alibaba has a greater market value than Amazon, Walmart and eBay"?
