Other comments or suggestions:

The submitted thesis by Aneta Kašíková "Comparison of aromatic compounds in jasmine rice of different origin" unfortunately suffers from typical shortcomings of theses completed in a hurry. The literature search was well written; the student obtained samples for her research in Thailand and the Czech Republic, optimized the methodology, performed the analyses and started processing the results. However, by the final stage of completing the thesis, there was no longer enough time to evaluate all the results she had obtained, so only a sample of fifteen was used. Due to the lack of time, there is very little discussion in the thesis. Since I have followed the whole process of preparing and processing the research and I know that the student worked with the literature, did the laboratory work, spent enormous time evaluating the results and tried to write the best possible thesis in the time she had left, I recommend the thesis for defense and rate it as good.

Plagiarism control: The system Theses.cz has assessed the thesis as suspicious. After a manual check the file was not assessed as plagiarism.
